maxiflex Emporium

The Losberger Emporium - an attractive space solution in the Losberger modular component system

The Emporium can't be compared with ordinary two-storey-tents and offers a much larger spectrum of applications. With base grid elements of 5.0 x 5.0 m and cantilever extension units of 2.5 x 5.0 m it can be freely set up in every large tent as a second level. It can be utilized as a complete upper floor, as

a balcony or as a freestanding gallery.

There are numerous possibilities of floor plans. At large events the Losberger Emporium can also be used as an overlooking platform. As usual with Losberger, it mainly consists of aluminium, which results in large advantages during handling. Three-ply wood panels (27 mm thick) are installed on the laminated wooden intermediate purlins. This has the effect that hardly any noise

arises during walking. The Emporium staircases also consist of anodized aluminium. Staircase landings as well as a large variety of staircases are available due to Losberger's patented combination element. The hidden hinge system for the aluminium railings, which appear to be made of filigree, makes it even more appealing.

The Emporium is developed based on the Losberger maxiflex tent system. Therefore many components

LOSBERGER

already used in the maxiflex tent system, which the renter already has in stock, can be employed for the construction of the Emporium, e.g. the cassette floor and the PVC or glass wall elements.
The Emporium creates a perfect atmosphere for all kinds of events. Glass fronts, roofed terraces, balconies and outside staircases

meet and exceed anyone's expectations. The Emporium opens up new and interesting business opportunities.
